ROADMAP TO SUSTAINABILITY

Opting for a more innovative type of Natural Dye: **MINERALS**

MINERAL DYE

Mineral dyes come from specific rocks and soils in special localised areas on earth that were formed through the slow evolution of the geoligical eras and volcanic eruptions.

These inorganic dyes are known for their intensity on specific colours and are suitable for all kinds of fabrics.

After the substance is collected, it is grinded into fine powder to be dissolved further in water and consequently ready for the dyeing process.

CERTIFICATIONS

GLOBAL ORGANIC TEXTILE STANDARD GOTS

OEKO-TEX® CONFIDENCE IN TEXTILES STANDARD 100

ZDHC

BENEFITS

DYEING WITHOUT SALT

HIGH COLOR-FASTNESS

SOFT SHADE

HIGH REPRODUCIBILITY

HIGH GRADE OF CROCKING

ADDED VALUE
Does not come from a chemical controllable process
